OPEN SOURCE

110 pull requests merged into 32 upstream projects, which together carry **626,632** GitHub stars. Most fix defects continuous integration never sees, because hosted runners do not match the machines real users have: Windows path handling, locale encoding and line endings account for the majority.

- Merged at **Microsoft** (14), **NVIDIA**, **OpenAI**, **Anthropic**, **AWS**, **Google**, **Hugging Face**, **rust-lang**, **Astral** (uv, 90k stars), **Pydantic**, **Express** (multer, 12k stars), tox and pdm.
- Deepest in simple-statistics (21 merged), NegPy (17), gorakhargosh/watchdog (10), microsoft/hve-core (8) and mcp-use (6). At Anthropic, a line-ending normalization fix merged into claude-code-action.
- A Windows path-containment fix was adopted with credit into garrytan/gbrain (30k stars) and shipped in v0.46.14.0.

EXPERIENCE

Shell | Data Analyst

Jun 2026 – Aug 2026

- Built a Python pipeline turning daily production data into validated dashboards, PDF reports and email-ready output in about two minutes, replacing a manual process.
- Added an interactive dashboard for asset-level filtering, well search and performance tracking, validating every Excel input before anything reaches a report.

ProofX | Founder and Lead Engineer

Aug 2025 – Jul 2026

- Built **CollatzX**, a directed counterexample search engine running roughly 10M sequence iterations per second on commodity hardware, with hashed state tracking and replayable run ledgers.
- Built **Germinal**, a pipeline that proposes conjectures, formalizes them in Lean 4 and attacks them with three independent counterexample methods. Worked with MIT E14 Lab partners on technical direction and reproducibility standards.
- Every run records its command, seed, budget and code revision, so any result can be reproduced exactly or challenged.

SELECTED PROJECTS

Switchyard | TypeScript, npm

2026

- Coordination layer for running several coding agents against one repository. Each agent gets an isolated git worktree and branch; merges are simulated in memory to separate files that merely overlap from changes that would actually conflict.
- Published as @switchyardhq/switchyard, now v0.4, with line-range collision detection and read-only MCP access to fleet state.

contextbill | TypeScript, Next.js, Supabase

2026

- Prices Claude Code transcripts. A zero-dependency CLI on npm and a hosted app share one analysis core, so the same transcript prices identically on either surface.

Corporate Financial Distress Prediction | Python, scikit-learn

Dec 2025 – Feb 2026

- Interpretable pipeline over roughly 105K firm-year observations standardizing 60+ financial ratios. K-Means segmentation with cluster-aware logistic regression reached 81% accuracy and 0.84 ROC-AUC. Benchmarked against XGBoost at 0.90 and kept the interpretable model, since the target was regulatory early warning rather than raw score.

EDUCATION

University of California, San Diego | B.S. Computer Science

Starting Fall 2026

University of Pennsylvania | non-degree program

Sep 2025 – Apr 2026

HONORS

- **Thiel Fellowship Semifinalist** (Feb 2026). Top ~3% of 3,000+ global applicants.
- **MIT Bitcoin Hackathon** (Apr 2026). Top 22 of 47 teams for BridgX, a BTC-to-EVM bridge prototype built in 36 hours.
- **Oman National Scholarship**, Ministry of Higher Education (Aug 2025). Fully funded national award.

COMMUNITY AND LEADERSHIP

- **Oman Space**, Co-Founder (Aug 2026 – present). Connecting Omani students with aerospace organizations, founders and practical routes into the sector.
- Claude Builder Club and Penn Quantum Computing Club, member. Penn Chess Club, VP Marketing. Write about engineering and open source to an audience of 4,400+ on LinkedIn.

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, SQL, Solidity, Lean 4

ML and data: PyTorch, scikit-learn, pandas, NumPy, XGBoost, K-Means, PCA, FastAPI

Systems: Git, React, Next.js, Supabase, SQLite, HPC, EVM/Solidity, PyQt5

Certifications: Machine Learning Specialization (Stanford), CS50x and CS50P (Harvard) · **Spoken:** Arabic and English, both native
